User and item bias *	0.3158	0.6226	2.6118	3.1966	1	ABSTAIN
User mean	undefined	0.7153	undefined	undefined	1	ABSTAIN

Score: mean within-cluster Spearman correlation over clusters where it is defined; descriptive only. MAE: original-scale mean absolute error, with domain-specific units. The CSV retains full stored precision.

RETAIN is the operational diagnostic screen at 0.05; real-panel calibration is not established. NOT_RETAINED means non-rejection; original CSV null codes denote the same decision. ABSTAIN denotes a guard or an undefined statistic. An asterisk marks the five finite copy or weak-order guards.

Global mean and User mean have undefined descriptive scores and statistics. SVD interaction is an interaction-only score and has no rating-scale MAE. Training series mean has an undefined statistic scale. All three undefined statistic pairs remain in their model families.
